PROFESSIONAL SUMMARY

M.S. Computer Science graduate with project experience in full-stack web development, automated QA, CI workflows, systems programming, and Unreal Engine 5 development. Built and deployed TypeScript applications with automated UI/API test coverage and GitHub Actions regression tests. Also developed a dedicated-server multiplayer VR prototype and C++/Blueprint RPG Unreal Engine projects. Seeking software engineering, QA automation, Unreal Engine, XR, or simulation-development roles.

TECHNICAL EXPERIENCE

Independent Software Development

Grand Junction, CO | May 2023 – Present

- **Multiplayer VR Prototype:** Built a dedicated-server VR prototype in Unreal Engine 5 using Blueprints and the VR Expansion Plugin. Integrated VR gripping/held-object workflows and MetaHuman dagger lodging. Implemented replicated flashlight state, server-authoritative melee damage, enemy health/ragdoll death, and PawnSensing-driven combat AI.
- **Top-Down GAS RPG:** Developed a top-down Unreal Engine 5 RPG project using C++, Blueprints, and the Gameplay Ability System. This project features enemy combat, experience progression, save-slot persistence, ability loadouts, and upgradeable fireball, lightning, and arcane-shard abilities.
- **Full-Stack Web Applications:** Designed and deployed TypeScript-based full-stack applications using Next.js, tRPC, Prisma, Tailwind CSS, authentication workflows, email verification/notification services, database-backed features, and cloud hosting.
- **Automated QA & CI/CD:** Built end-to-end UI and API test suites using Playwright, Selenium, Pytest, and Requests; configured GitHub Actions to run automated regression checks on repository commits.
- **Multi-Client Server:** Developed a concurrent client-server application in C using POSIX threads, UNIX domain sockets, mutex synchronization, signal handling, and thread lifecycle management.

Audit Staff | Dalby Wendland | Grand Junction, CO

July 2019 – May 2020

- Prepared audit workpapers, analyzed financial data using advanced Excel, and communicated with clients to obtain and clarify supporting documentation.

Database Specialist — Body Farm Database Project

Colorado Mesa University | Grand Junction, CO | January 2018 – May 2018

- Gathered requirements from researchers, translated operational needs into normalized relational database schemas, created tables, relationships, ER diagrams, data dictionaries, forms, reports, and queries to support data entry and reporting.

EDUCATION

M.S., Computer Science — Stevens Institute of Technology, Hoboken, NJ

May 2025 | GPA: 3.934

B.S., Computer Information Systems; B.S., Public Accounting — Colorado Mesa University, Grand Junction, CO

December 2018 | GPA: 3.76

SKILLS

Unreal Engine: Unreal Engine 5, Blueprints, C++, VR Expansion Plugin, Gameplay Ability System

Languages: Python, TypeScript, JavaScript, C++, SQL

Testing & Automation: Playwright, Selenium, Pytest, Requests, Postman, API testing, regression testing

Web: Next.js, React, tRPC, Prisma, Tailwind CSS, REST APIs, HTML, CSS

Tools & Data: Git, GitHub, GitHub Actions, DevOps, PostgreSQL, Docker
